Sequence 18 Application US/09144925
PATENT NO. 5951979
GENERAL INFORMATION:
APPLICANT: Tonks, Nicholas
APPLICANT: Flint, Andrew J.
TITLE OF INVENTION: SUBSTRATE TRAPPING PROTEIN
TITLE OF INVENTION: TYROSINE PHOSPHATRSES
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
ADDRESSEE: HAMILTON, BROOK, SMITH & REYNOLDS, P.C.
STREET: Two Militia Drive
CITY: Lexington
      Pred. No. 0.00091;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER: IEM Compatible

| Sequence 7, Application US/08015985
| Patent No. 553886
| GENERAL INFORMATION:
| APPLICANT: Sab, Jan M.
| TITLE OF INVENTION: HOUSE RECEPTOR-TYPE PHOSPHOTYROSINE TITLE OF INVENTION: HOSPHATASE-ALPHA NUMBER OF SEQUENCES: 14
| CORRESPONDENCE ADDRESS: 14
| CORRESPONDENCE ADDRESS: NATE & EDMONDS STREET: 1155 AVENUE OF THE AMERICAS CITY: NEW YORK STATE: NEW YORK STATE: NEW YORK STATE: NEW YORK STATE: NEW YORK COUNTRY: U.S.A.
| ZIP: 10036 COMPUTER READABLE FORM: MEDIUM TYPE: Floppy disk COMPUTER: IBM COMPUTER: 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 236;
                                                                                                                                                                                                                                                                                                                      COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/280,597
FILING DATE: US/09/280,597
FILING DATE: 10-FEB-1993

Patent No. 6682905
GENERAL INPORMATION:
APPLICANT: Schlesinger, Joseph
APPLICANT: Sap, Jan M.
TITLE OF INVENTION: NOVEL RECEPTOR-TYPE PHOSPHOTYROSINE
TITLE OF INVENTION: PHOSPHATASE-ALPHA
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: PRINIE & EDWONDS
STATE: 1155 AVENUE OF THE AMERICAS
STATE: NEW YORK

Sequence 14, Application US/08685992

Patent No. 5912138

GENERAL INFORMATION:
APPLICANT: Tonks, Nicholas

TITLE OF INVENTION: SUBSTRATE TRAPPING PROTEIN

TITLE OF INVENTION: TYROSINB PHOSPHATASES

NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:
ADDRESSER: HAMLITON, BROCK, SMITH & REYNOLDS, P.C.

STREET: TWO Militia Drive

CITY: Lexington
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 23, Application US/0868592

-!- TISSUE SPECIFICITY: Expressed in a variety of human tissues including kidney, skeletal muscle, lung and placenta.
-!- SIMILARITY: Contains 1 FERM domain.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2404 IITHCSAGIGRSGTLICIDVVLGLISQDLDFDISDLYRCWRLQRHGWVQTE 2454

-- SUBCELLULAR LOCATION: Cytoplasmic.
-- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
-- SIMILARITY: Contains 1 FRRM Gomain.
-- SIMILARITY: Contains 1 PDZ/DHR domain.
                                                                                                                                                                                                                                                 "Isolation of a cDNA clone encoding a human protein-tyrosine phosphatase with homology to the cytoskeletal-associated proteins band 4.1, exrin, and talin."; Proc. Natl. Acad. Sci. U.S.A. 88:5949-5953(1991).

Biochem. Biophys. Res. Commun. 203:479-484(1994).
-!- FUNCTION: MAY BE INVOLVED IN THE REGULATION OF T CELL DEVELOPMENT.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            73; Mismatches 149; Indels 182; Gaps
                                 tyrosine + phosphate.
--- TISSTE SPECIFICITY: Thymus; in cells of both hematopoietic and non-hematopoietic origins.
--- SIMILARITY: Contains 1 FERM domain.
--- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 456; DB 1; Length 1189;
